Content Creation Agent

PROPOSAL(1 PAGE VERSION) | AREEB TECHNOLOGY

EXECUTIVE SUMMARY

Organizations struggle to scale corporate content. The continuous demand for high-quality posts clashes with manual, fragmented production workflows. We propose a 4-stage intelligent agent pipeline that automates this entire process.

1. The Challenge

Inauthentic Output

AI drafts lack necessary human warmth.

Rigid Formats

Content ignores platform-specific rules.

Context Amnesia

Tone and brand memory reset per session.

2. The Solution Pipeline

1 **Normalize** Standardizes raw input

→

2 **Research** Injects live facts

→

3 **Generate** Drafts on-brand content

→

4 **Enforce** Applies voice guardrails

3. Model Selection (Benchmarks)

GPT-4.1-mini (Agent 0 & 1)

Scores 84% on IFEval. Ideal for structure.

Claude Sonnet 4.5 (Agent 2)

Scores 61.4% on OSWorld. Best human tone.

GPT-4.1 (Agent 3)

Reliable instruction adherence for editing.

4. System Architecture
